

The Chairman welcomed the attendance at the meeting of Sir Frank Dyson, retired Astronomer Royal from Greenwich and also Dr J. Jackson His Majesty's Astronomer at the Cape - successor to Dr Henry Jones.

The Chairman said that various members had come prepared to answer a number of questions that had been submitted to the Committee as Sir Frank Dyson had expressed his willingness to address the meeting he proposed that the questions and replies stand over for till a later date.

Sir Frank Dyson then addressed the meeting on the history of the Greenwich Observatory, he gave a biographical sketch of each Astronomer Royal giving particulars of their contributions to the advance of Astronomical knowledge and described the improvements made to Greenwich Observatory by each and the instruments used.

The address was very fully illustrated by lantern slides

After a short discussion a hearty vote of thanks to Sir Frank was passed with acclamation and the proceedings terminated

R Watson
