

Among the diagrams we were shown, covering the discoveries from the beginning of the century to 1962, were those by Kapteyn, Chartier, Stromberg, Linkblad and Hall's. The significance of the discoveries of the movements of stellar masses were made far clearer and more understandable by the use of these diagrams.

Dr Feast proposed the thanks of the centre and the meeting closed for tea at 10:00 pm.

Brook

chairman 8/7/81.
