

Month: December 2024

• NEWS FROM THE SOLAR SECTION

December 2024 solar news

The sunspot number for December saw a small increase from 152.5 to 154.5, marking an increase of 2. As seen in historical solar cycles, solar maximum is sometimes seeing two peaks before declining towards the solar minimum. Data for cycle 25 suggests that this may be the case for cycle 25 as well.

When more than 1 observer is submitting sunspots, the average per day is calculated and noted.

## SOLAR FLARE ACTIVITY DECEMBER 2024

Solar flares are classified according to their x-ray brightness in the wavelength range 1 to 8 Angstrom. There are 3 categories: C class – minor, M class – medium and X class – big. Each category has 9 subdivisions.

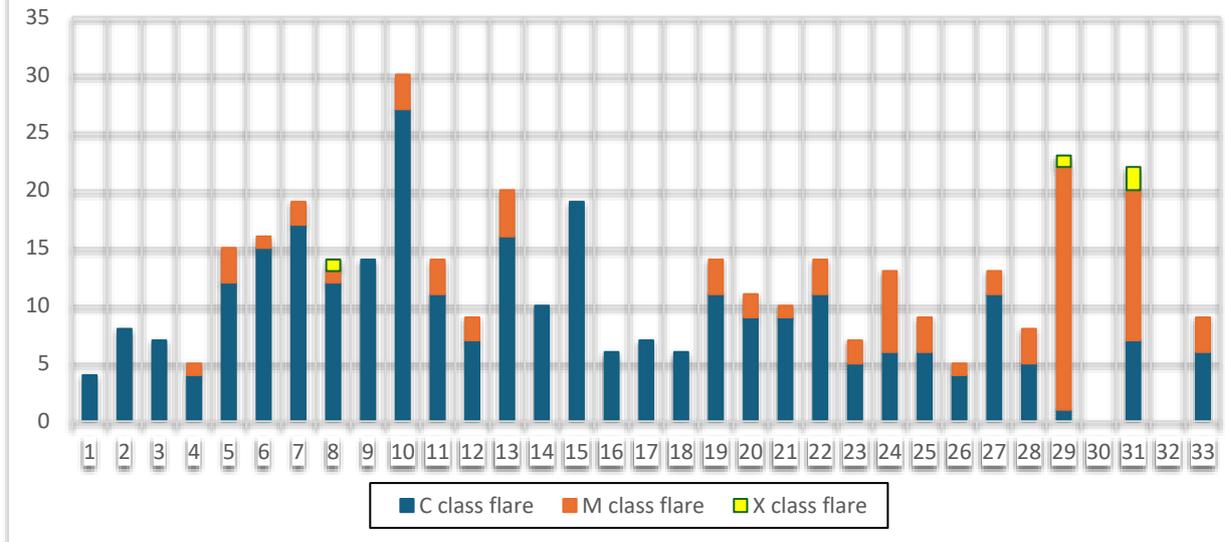

A total of 381 solar flares were observed: 293 C-class flares and 84 M-class flares and 4 X class flares.

Solar flare data: LABORATORY OF X-RAY ASTRONOMY OF THE SUN

## Solar flare data December 2024

- **Geomagnetic data**

### **K INDEX**

Scientists monitor geomagnetic activity using various instruments, including magnetometers and satellites, to better understand the processes involved and predict potential impacts on technological systems such as power grids, communication networks, and navigation systems as well as changes in our climate. Severe geomagnetic storms have the potential to disrupt these systems, making the study of geomagnetic activity crucial for both scientific understanding and practical applications.

Increased geo-magnetic activities are caused by Coronal Mass Ejections (CME's) triggered by solar activities such as solar flares, filament eruptions and Coronal openings.

The K-index scale has a range from 0 to 9 and is directly related to the maximum amount of fluctuation (relative to a quiet day) in the geomagnetic field over a three-hour interval.

### Geomagnetic Storm Index

Credit: NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION

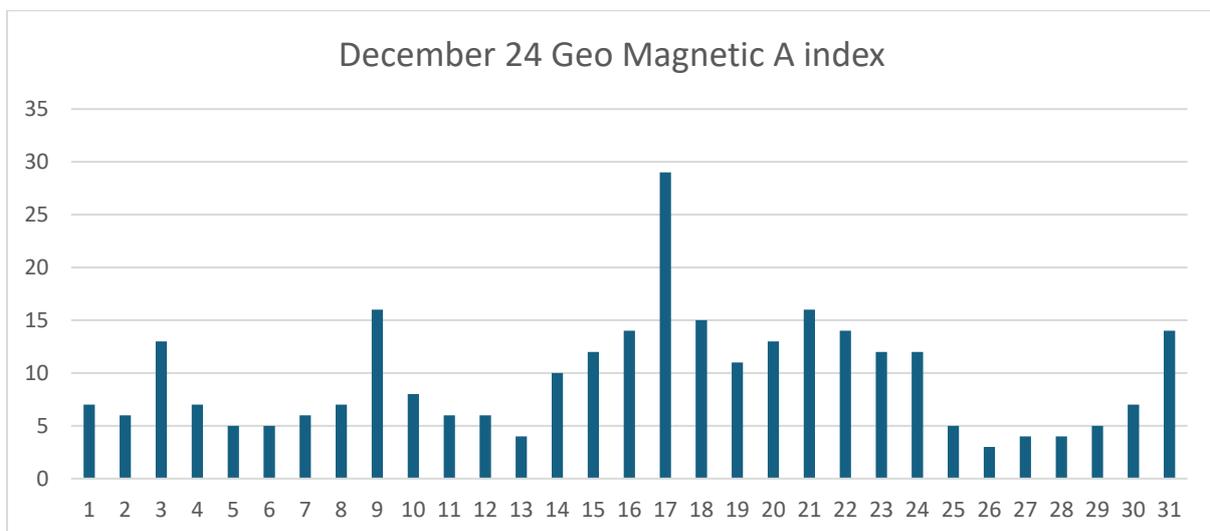

## A INDEX

The solar A Index is a numerical scale that represents the geomagnetic activity in the Earth's ionosphere caused by solar flares and other solar phenomena. It measures the overall geomagnetic disturbance level on a scale from 0 to 400. The index is derived from the observed planetary A index, which quantifies the magnetic activity over a 24-hour period.

Here's a breakdown of the solar A Index scale:

- 0 to 7: Quiet geomagnetic conditions.
- 08 to 15: Unsettled geomagnetic conditions.
- 16 to 29: Active geomagnetic conditions.
- 30 to 49: Minor storm levels.
- 50 to 99: Major storm levels.
- 100 and above: Severe storm levels.

A higher A Index generally indicates more disturbed geomagnetic conditions. This index is valuable for radio operators, especially those involved in high-frequency (HF) radio communication, as it helps predict the likelihood of signal disruptions due to solar activity. The solar A Index is typically updated regularly and is an important tool for space weather monitoring and forecasting.

December 24 witnessed a dynamic range of geomagnetic activity, with a peak on Day 17, likely tied to a solar event that temporarily disturbed Earth's magnetic field. The period following this spike reflects elevated but stable activity, suggesting ongoing interactions between solar wind and Earth's magnetosphere. By the final week, geomagnetic activity subsided, indicating a return to quieter conditions. This data highlights the Sun's influence on Earth's space weather, emphasizing the importance of monitoring such indices for predicting potential impacts on satellite systems, communication networks, and even auroral displays.

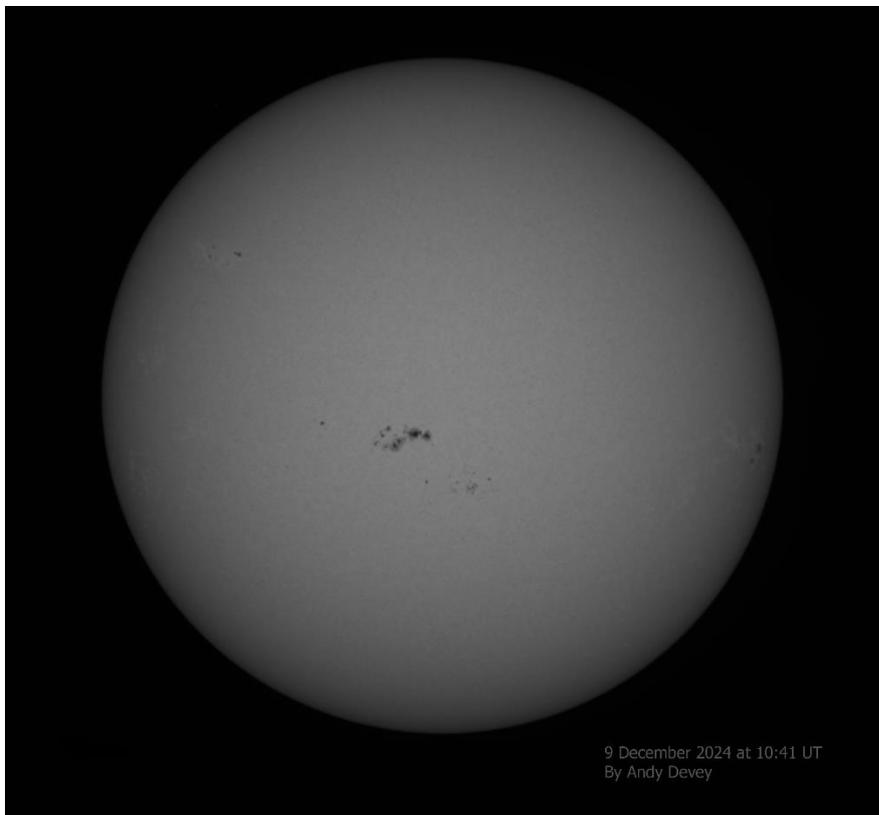

- **H Alpha Observations**

One observer shared his H-Alpha data for December 2024. Andrew Devey from BAA & MSAS living in Spain. Our regularly observer Mick Nicholls from BAA & MSAS living in the UK will be out of action for some time due to the position of the Sun in winter. This makes observations not possible.

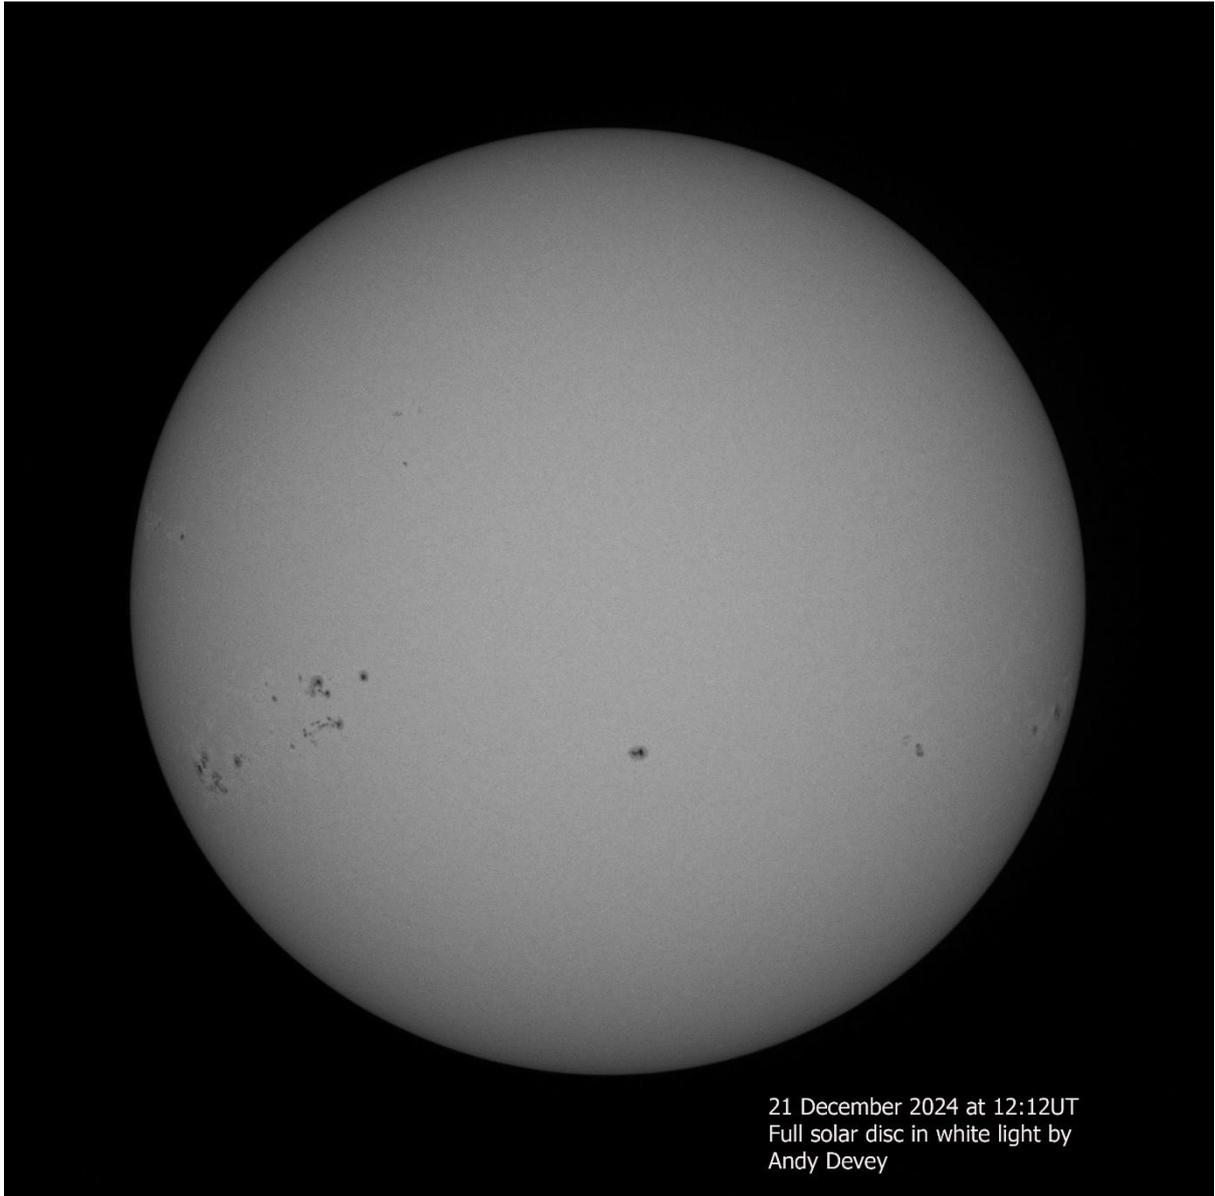

| December 2024 | Counts | Observations | MDF |
|---------------|--------|--------------|-----|
| Prominance    | 138    | 28           | 4,9 |
| Plage Areas   | 128    | 28           | 4,6 |
| Filaments     | 245    | 28           | 8,8 |
| Flares        | 4      | 28           | 0,1 |
