

THE  
ASTRONOMICAL SOCIETY  
OF  
SOUTHERN AFRICA

---

HANDBOOK FOR  
1960

# THE ASTRONOMICAL SOCIETY OF SOUTHERN AFRICA

## 1959 — 1960

*President:*

Mr. P. Smits.

*Vice-Presidents:*

Professor H. Haffner.

Mr. G. B. Anderson.

Mr. M. D. Overbeek.

*Hon. Secretary:*

Mr. A. Menzies.

*Hon. Treasurer:*

Mr. G. Orpen.

*Members of Council:*

Mr. M. J. Bester, Dr. David S. Evans, Dr. W. S. Finsen, Mr. R. J. Johnston,  
Mr. G. F. G. Knipe, Professor R. H. Stoy, Dr. A. D. Thackeray.

The Astronomical Society of South Africa was formed in July 1922, by the amalgamation of the Cape and Johannesburg Astronomical Associations which had been in active existence for several years. Its name was changed to the Astronomical Society of Southern Africa in 1956. The declared objects of the Society are:—

- (1) The encouragement and stimulation of the study of Astronomy in Southern Africa;
- (2) The association of observers and their organisation in the work of astronomical observation and research;
- (3) The dissemination throughout Southern Africa of such current astronomical information as may be helpful to observers;
- (4) The publication from time to time of the results of the work accomplished by the Society.

Membership is open to all who are interested in Astronomy. The Society issues, usually, eleven numbers of "The Monthly Notes of the Astronomical Society of Southern Africa" (M.N.A.S.S.A.) each year, and distributes to each member copies of "Sky and Telescope", an illustrated monthly astronomical magazine published in the United States.

Candidates for election as members of the Society must be proposed and seconded by two members (not associate or student members). The annual subscription is £2 2s., with an entrance fee of £1 1s. The annual subscription to M.N.A.S.S.A. for non-members is £1 1s.

Subscriptions and enquiries concerning M.N.A.S.S.A. only should be addressed to the Circulation Manager, Mr. H. E. Krumm, 3, Leeuwental Crescent, Cape Town.

All other communications for the Society should be addressed to the Hon. Secretary, Astronomical Society of Southern Africa, c/o The Royal Observatory, Observatory, Cape Province.

### SOCIETY'S CALENDAR FOR 1960

Material and Notes for M.N.A.S.S.A. by 20th of the month.

Nominations for Gill Medal by April 8.

Essay Competition closes May 31.

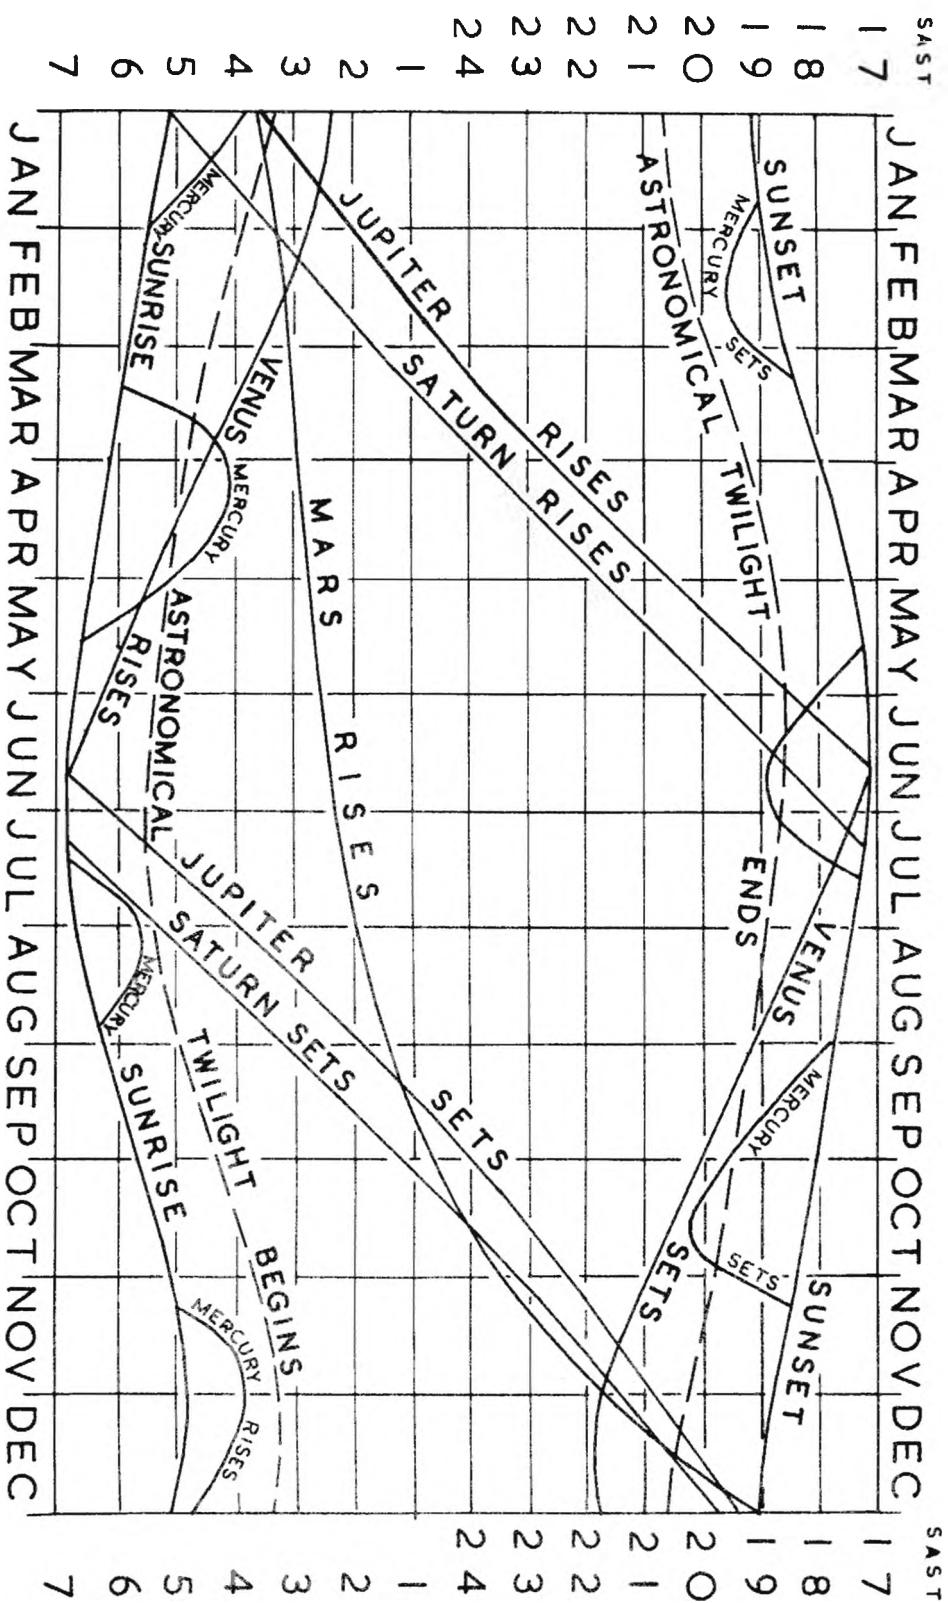

Nominations for Officers and Council by June 15.

Subscriptions due July 1.

Annual General Meeting at all Centres 4th Wednesday in July.

# THE PLANETS AS SEEN FROM SOUTH AFRICA

## CONTENTS

	Page
Planetary Diagram .....	Frontispiece
Introduction .....	3
Julian Date, Sun's Transit and Sidereal Time .....	5
The Moon: Perigee, Apogee, Maximum Libration .....	6
Tables of Moonrise and Moonset .....	7
Occultations of Bright Stars .....	19
Eclipses .....	23
Transit of Mercury .....	23
The Planets .....	24
Ephemeris for Uranus and Neptune .....	25
Meteor Calendar .....	26
Astronomical Diary .....	28
Bright Variable Stars .....	32
South African Observatories .....	33
Past Presidents, Honorary Members and Honorary Secretaries	34

---

Grateful acknowledgement is made to H.M. Nautical Almanac Office for the data included in the table of Occultations of Bright Stars.

---

## INTRODUCTION

All the times given in this booklet are South African Standard Time, that is, mean solar time for a meridian  $30^{\circ}$ , or two hours, east of Greenwich. This is also the Standard Time in use in the Central African Federation, the Protectorates, Mozambique and the eastern part of the Belgian Congo.

To obtain the local mean time at other places the longitude differences shown in Table I must be applied to the ordinary S.A.S.T.

TABLE I  
CORRECTION FOR LONGITUDE

Bloemfontein	-15 <sup>m</sup>	Grahamstown	-14 <sup>m</sup>
Cape Town	-46	Johannesburg	-08
Durban	+04	Port Elizabeth	-18
East London	-08	Pretoria	-07
Salisbury	+04	Bulawayo	-06

Conversely, to obtain the S.A.S.T. from the local mean time these longitude corrections must be applied with the sign reversed. Thus the S.A.S.T. of local mean noon (i.e. 12h 00m local mean time) at Port Elizabeth is 12h 18m.

Owing to the fact that the Earth does not go round the Sun with uniform circular motion in the plane of the Earth's equator, the local apparent solar time (i.e. the time shown by a sundial) differs from the local mean solar time by a quantity which is usually referred to as the "Equation of Time". The Equation of Time must be added to the mean solar time to give the apparent solar time. Its effect is shown in the third column of Table II which gives the S.A.S.T. of apparent noon, that is, of the Sun's transit over the meridian.

For example, the S.A.S.T. of apparent noon at Port Elizabeth on 1960 November 12 is 12.02 S.A.S.T., found by applying the longitude correction of +18m to the tabulated value for  $30^{\circ}$  E,  $30^{\circ}$  S.

For many purposes sidereal time, that is, local time as measured by the stars, is extremely useful. The sidereal time can be found by applying the S.A.S.T. (on a 24 hour basis) to the corresponding "Sidereal Time at 0 hours S.A.S.T." which is given in the fourth column of Table II and correcting for longitude by means of Table I. A further small correction is needed to allow for the four-minute difference in length between the solar and sidereal days.

The correction is +1m for times between 03.00 and 09.00 S.A.S.T., +2m between 09.00 and 15.00, +3m between 15.00 and 21.00 and +4m between 21.00 and 23.59.

Example: Find the sidereal time at 8.15 p.m. on October 13 at Port Elizabeth.

Sid. Time at 00 <sup>h</sup> .00 <sup>m</sup>	S.A.S.T. on October 13	h. m.
	S.A.S.T. elapsed	01 26
		20 15
		<hr/>
		21 41
Correction for longitude		-18
Interval correction		<hr/>
Required Sidereal Time.		+3
		<hr/>
		21 26

For recording the time of variable star observations, the Julian Day Calendar is usually used. This numbers the days consecutively from the beginning of the Julian Era in 4713 B.C. The Julian Day begins at Greenwich mean noon, that is, at 14.00 (2 p.m.) S.A.S.T.

The position of a star in the sky is fixed by its right ascension and declination, much as the position of a point on the earth is fixed by its longitude and latitude. In fact the right ascension and declination of any star are the longitude and latitude of the point on the earth directly beneath it at zero hours sidereal time at Greenwich. Latitude and declination are always measured in degrees north or south of the equator. Longitude and right ascension are measured either in degrees or in time,  $360^\circ$  being equal to 24 hours ( $1^\circ$  equals 4 minutes;  $1'$  equals 1 minute). Right ascension is always measured eastwards from the zero celestial meridian, and thus is the equivalent of the longitude measured eastwards from the Greenwich Meridian.

For considering the motions of the Sun, Moon and Planets, the system of co-ordinates known as celestial latitude and longitude is very convenient. These co-ordinates define the position of a celestial body with reference to the ecliptic in exactly the same way as right ascension and declination define its position with reference to the celestial equator. The (celestial) latitude is the angular distance of the body north or south of the ecliptic, while the longitude is the distance from the Vernal Equinox as measured eastwards along the Ecliptic. Celestial latitude and longitude are usually measured in degrees. For example, the co-ordinates of the radiants in the Meteor Calendar are expressed in this way.

The ecliptic is defined by the apparent path of the Sun about the Earth. The latitude of the Sun is therefore always (approximately) zero, whilst its longitude increases by approximately  $1^\circ$  per day.

## ECLIPSES

There will be four eclipses in 1960, two of the Sun and two of the Moon. None of these, however, will be visible in Southern Africa.

1. Total eclipse of the Moon, March 13. Invisible in Africa.
2. Partial eclipse of the Sun, March 27. Invisible in Africa. Visible in S. Australia and Antarctica.
3. Total eclipse of the Moon, September 5. Invisible in Africa.
4. Partial eclipse of the Sun, September 20-21. Invisible in Africa. Visible in E. Siberia and N. America.

----ooooOoooo---

## TRANSIT OF MERCURY

A transit of Mercury over the disk of the Sun will occur on November 7.

In Southern Africa ingress occurs during late afternoon, but egress occurs after sunset and is therefore, not visible.

The S.A. standard times of ingress have been computed for four localities as follows:-

	Exterior Contact	Interior Contact
Port Elizabeth	16 <sup>h</sup> 33 <sup>m</sup> 18 <sup>s</sup> .9	16 <sup>h</sup> 35 <sup>m</sup> 19 <sup>s</sup> .3
Durban	16 33 19.3	16 35 19.7
Cape Town	16 33 21.1	16 35 21.6
Johannesburg	16 33 21.4	16 35 21.8

Duration from exterior ingress to exterior egress is approximately 4<sup>h</sup> 38<sup>m</sup> 20<sup>s</sup>. Position angle of the point of exterior ingress reckoned from the North point of the Sun = 148°.3 Least angular distance = 8° 48'.1.

## THE PLANETS

The chart (frontispiece) shows the S.A.S.T. of the rising and setting of the Sun and the Planets at a place whose latitude and longitude are  $30^{\circ}$ S,  $30^{\circ}$ E. The approximate times for other places can be found by applying the longitude differences shown in Table I with the sign reversed, e.g. for Cape Town add 46 minutes, for Durban subtract 4 minutes. The correction in latitude will, in general, be sufficiently small to be ignored, and in no case will it exceed 15 minutes.

Mercury will be most easily seen just after sunset near the time of greatest (evening) elongation in June/July and October, and just before sunrise in March/April. Its magnitudes at these times will be +0.8, +0.1 and +0.6, respectively.

Venus can be seen as a morning star from January to May. From July to December it will be an evening star. It reaches its maximum brightness at magnitude -3.8 at the end of the year.

Mars will be visible in the morning sky from January to the middle of October. During the rest of the year it rises in the first half of the night and it will be in opposition to the Sun on December 30. Its brightness increases steadily throughout the year from magnitude +1.6 in January to magnitude -1.3 at the end of December, and its apparent diameter increases during the same period from 3".9 to 15".3.

Jupiter, rising well after midnight in the beginning of the year, will be in opposition to the Sun on June 30; it then remains a fine object in the evening sky until November.

Saturn can be observed in the morning sky from January to March, and during the whole night in June and July. It will be an evening object for the rest of the year. It reaches its maximum brightness, magnitude +0.3, near the time of opposition (July 7).

Neither Uranus, magnitude 5.7, nor Neptune, magnitude 7.7, is readily visible to the naked eye, but both are easy telescopic objects. They can easily be found during the first part of the year by means of the following ephemeris. Their respective times of opposition to the Sun are February 8 and April 28.

Ephemeris for Uranus and Neptune 1960

## ASTRONOMICAL DIARY

JANUARY 1960

Mercury is too close to the Sun for easy visibility. Venus is bright in the morning sky. Mars rises two hours before the Sun, a little after Jupiter. Saturn rises just before the Sun.

d. h.

Jan	4	Earth in perihelion.
	9 6	Venus $7^{\circ}$ N of Antares.
	11 6	Mercury $1^{\circ}.8$ S of Saturn.
	21 13	Venus $1^{\circ}.1$ N of Jupiter.
	22 7	Neptune $2^{\circ}$ S of Moon.
	25 17	Venus $4^{\circ}$ S of Moon.
	26 11	Mars $6^{\circ}$ S of Moon.
	26 17	Saturn $4^{\circ}$ S of Moon.
	26 17	Mercury in superior conjunction.
	31 13	Mars $1^{\circ}.2$ S of Saturn.

FEBRUARY 1960

Mercury may be visible in the western sky soon after sunset at the end of the month. Venus is still visible in the morning sky, while Mars rises about 3 hours before the Sun. Jupiter and Saturn rise about 4 hours before the Sun.

d. h.

Feb	6 18	Aldebaran $0^{\circ}.5$ S of Moon.
	7 13	Venus $0^{\circ}.2$ N of Saturn.
	8 21	Uranus at opposition.
	17 5	Venus $1^{\circ}.1$ N of Mars.
	22 2	Jupiter $5^{\circ}$ S of Moon.
	23 6	Saturn $4^{\circ}$ S of Moon.
	24 2	Mercury at greatest eastern elongation, ( $18^{\circ}$ ).
	24 9	Mars $5^{\circ}$ S of Moon.

MARCH 1960

Mercury is close to the Sun, while Venus is still visible in the eastern sky before dawn. Mars rises about 3 hours before the Sun while Jupiter and Saturn rise about midnight.

d. h.

Mar	10	23	Mercury in inferior conjunction.
	13	10	Eclipse of the Moon, not visible in South Africa.
	20	17	Equinox.
	21	16	Saturn $4^{\circ}$ S of Moon.
	24	6	Mars $4^{\circ}$ S of Moon.
	25	11	Mercury $1^{\circ}.9$ N of Venus.
	27	10	Eclipse of the Sun, not visible in South Africa.

### APRIL 1960

Mercury is easily visible in the morning sky, but Venus is becoming lost in the dawn light. Mars rises about 3 a.m., while Jupiter and Saturn rise before midnight.

d. h.

Apr	7	4	Uranus $4^{\circ}$ N of Moon.
	7	15	Mercury at greatest western elongation, ( $28^{\circ}$ ).
	16	21	Jupiter $5^{\circ}$ S of Moon.
	17	23	Saturn $4^{\circ}$ S of Moon.
	20	7	Jupiter stationary in R.A.
	22	3	Mars $2^{\circ}$ S of Moon.
	24	3	Mercury $1^{\circ}$ S of Moon.
	24	15	Occultation of Venus by the Moon.
	27	17	Saturn stationary in R.A.
	28	18	Aldebaran $0^{\circ}.5$ S of Moon.

### MAY 1960

Mercury is close to the Sun, and Venus rises in the dawn light. Mars rises about 2.30 a.m. Jupiter and Saturn rise in the early evening.

d. h.

May	6	4	Mercury $0^{\circ}.2$ S of Venus.
	14	3	Jupiter $5^{\circ}$ S of Moon.
	15	5	Saturn $4^{\circ}$ S of Moon.
	17	17	Mercury in superior conjunction.
	21	00	Occultation of Mars by the Moon, not visible in South Africa.

JUNE 1960

Mercury is easily visible in the evening sky after sunset, but Venus is close to the Sun. Mars rises about 2.30 a.m. Jupiter and Saturn rise about sunset and are visible all night.

d. h.

June 18	21	Mars $2^{\circ}$ N of Moon.
19	16	Mercury at greatest eastern elongation, ( $25^{\circ}$ ).
20	4	Jupiter at opposition.
20	7	Mercury $6^{\circ}$ S of Pollux.
21	12	Solstice
22	6	Aldebaran $0^{\circ}.5$ S of Moon.
22	18	Venus in superior conjunction.

JULY 1960

Mercury is close to the Sun and Venus sets soon after the Sun. Mars rises about 2 a.m. Jupiter and Saturn are still visible most of the night.

d. h.

July 2		Earth at Aphelion.
4	3	Neptune $2^{\circ}$ S of Moon.
7	8	Saturn at opposition.
8	20	Saturn $4^{\circ}$ S of Moon.
17	3	Mercury in inferior conjunction.
17	19	Mars $3^{\circ}$ N of Moon.

AUGUST 1960

Mercury is too close to the Sun for easy visibility, while Venus sets soon after sunset. Mars rises about 1.30 a.m. Jupiter and Saturn set soon after midnight.

d. h.

Aug 3	20	Jupiter $5^{\circ}$ S of Moon.
5	3	Saturn $4^{\circ}$ S of Moon.
5	21	Mercury at greatest western elongation, ( $19^{\circ}$ ).
8	16	Venus $1^{\circ}$ N of Regulus.
17	14	Mars $5^{\circ}$ N of Aldebaran.
20	20	Jupiter stationary in R.A.
31	2	Mercury in superior conjunction.
31	3	Jupiter $5^{\circ}$ S of Moon.

## SEPTEMBER 1960

Mercury sets soon after sunset, and Venus about half an hour later. Mars rises and Jupiter and Saturn set, soon after midnight.

d. h.

Sep	5	13	Eclipse of the Moon, not visible in South Africa.
	12	3	Aldebaran $0^{\circ}.2$ S of Moon.
	15	22	Saturn stationary in R.A.
	21	0	Venus $3^{\circ}$ N of Spica.
	21	1	Eclipse of the Sun, not visible in South Africa.
	23	3	Equinox.
	26	18	Mercury $1^{\circ}$ N of Spica.
	28	16	Saturn $4^{\circ}$ S of Moon.

## OCTOBER 1960

Mercury is visible in the evening sky, just west of Venus. Mars rises at midnight, and Jupiter and Saturn set at about the same time.

d. h.

Oct	12	0	Mars $5^{\circ}$ N of Moon.
	16	0	Mercury at greatest eastern elongation, ( $25^{\circ}$ ).
	25	0	Jupiter $5^{\circ}$ S of Moon.
	25	23	Saturn $4^{\circ}$ S of Moon.
	28	22	Venus $3^{\circ}$ N of Antares.

## NOVEMBER 1960

There is a transit of Mercury on the 7th, beginning at 4.33 p.m. and continuing until sunset. Venus is high in the evening sky. Jupiter and Saturn set soon after sunset.

d. h.

Nov	5	20	Aldebaran $0^{\circ}.4$ S of Moon.
	7	19	Mercury in inferior conjunction.
	9	2	Mars $6^{\circ}$ N of Moon.
	13	3	Mercury $0^{\circ}.2$ S of Neptune.
	19	4	Venus $2^{\circ}$ S of Jupiter.
	21	7	Mars stationary in R.A.
	21	17	Jupiter $5^{\circ}$ S of Moon.
	21	21	Venus $7^{\circ}$ S of Moon.
	24	10	Mercury at greatest western elongation, ( $20^{\circ}$ ).

DECEMBER 1960

Mercury will be too close to the Sun for easy visibility. Venus reaches its greatest brightness at the end of the month. Mars is in opposition at the end of the month and is visible all night. Jupiter and Saturn set at sunset.

Dec	3 3	Aldebaran $0^{\circ}.5$ S of Moon.
	3 6	Full Moon.
	6 8	Mars $7^{\circ}$ N of Moon.
	21 17	Venus $4^{\circ}$ S of Moon.
	21 22	Solstice
	25 8	Mars nearest to earth, (56 million miles).
	30 12	Mars at opposition.

## OBSERVING SECTIONS

The Observing Sections exist to encourage amateurs in carrying out useful research. Enquiries about their activities should be addressed to the Directors of the Observing Sections, whose names and addresses are given below:—

### Variable Stars:

Mr. R. P. de Kock, The Royal Observatory, Observatory, Cape.

### Meteor Section:

Vacant.

### Computing and Occultation Section:

Mr. W. P. Hirst, "Water's Edge", Greenbanks Road, Rondebosch, Cape.

### Planetary Section:

Mr. I. R. H. Brickett, c/o Union Observatory, Johannesburg.

### Nova Search Section:

Mr. R. S. Tuffin, P.O. Box 1431, Johannesburg.

A number of autonomous local Centres of the Society exists, which hold regular meetings.

Details of Centre organisation are as follows:—

### CAPE CENTRE:

Chairman:	Mr. W. C. Bentley.
Vice-Chairman:	Mr. J. Simenhoff.
Hon. Secretary:	Mr. N. Saville.
Hon. Treasurer:	Mr. H. E. Krumm.
Hon. Auditor:	Mr. A. Menzies.
Council Representative:	Mr. R. J. Johnston.
Members of Committee:	Messrs. J. Churms, P. L. Meadows, I. Rodger, T. W. Russo and J. C. van Loon.

Meetings in winter on 2nd Wednesday of month at the Royal Observatory.

Secretarial address, c/o The Royal Observatory, Observatory, Cape.

### TRANSVAAL CENTRE:

Chairman:	Mr. G. F. G. Knipe.
Vice-Chairman:	Mr. J. L. Jooste.
Hon. Secretary:	Mr. A. Johnston.
Hon. Treasurer:	Mr. J. Vollmer.
Curator of Instruments:	Dr. P. Kirchhoff.
Pretoria Representative:	Mr. J. L. Jooste.
Pretoria Member:	Mr. R. Smith.
Members of Committee:	Mr. I. R. H. Brickett, Dr. M. W. Feast, Dr. K. G. Fuhr, Mr. R. S. Tuffin, Dr. C. N. Williams.

Observing and lecture meetings in alternate months.

Secretarial address, c/o Union Observatory, Gill Street, Observatory, Johannesburg.

### PORT ELIZABETH CENTRE:

Chairman:	Mr. J. C. Bentley.
Vice-Chairman:	Prof. M. N. S. Immelman.
Hon. Secretary:	Mr. W. L. Schlesinger.
Hon. Treasurer:	Mr. E. F. Jansen.
Members of Committee:	Dr. Reid, Messrs. H. Welsh, A. A. Foster, E. Warring, Woodall, G. Anderson, Haigh, B. Simpson, E. Blignaut.

Secretarial address, 120a Princes Street, Port Elizabeth.

### BLOEMFONTEIN CENTRE:

Chairman:	Dr. C. B. van Wyk.
Hon. Secretary:	Mr. N. Lincoln.
Hon. Treasurer:	Mr. J. C. van Loggerenberg.
Members of Committee:	Dr. H. Haffner, Mr. M. J. Bester.

Secretarial address, Bloemfontein Club, P.O. Box 83, Bloemfontein.

### NATAL CENTRE:

Chairman:	Mr. H. Ottens.
Hon. Secretary:	Mr. M. Burns.
Members of Committee:	Messrs. S. Nel, W. de Palo, C. Pollard.

Secretarial address, 57 Delew Court, 110 Stanger Street, Durban.
